Function Call	A function call is the act of executing the code within the function using the provided arguments.

range()

Generates a sequence of numbers within a specified range.

Return Statement

`Return` is a keyword used to send a value back from a function to its caller.

Try-Except Block

Tries to execute the code in the try block. If an exception of the specified type occurs, the code in the except block is executed.

Syntax:

```
1. 1
2. 2
```

Try-Except with Finally Block

Code in the `finally` block always executes, regardless of whether an exception occurred.

While Loop

A `while` loop repeatedly executes a block of code as long as a specified condition remains `True`.
